SUMMARY

Software Engineer at Cisco with experience in building and improving internal developer tools. Contributed to changelog systems with version comparison features to enhance visibility of package updates. Skilled in React, JavaScript, and Git workflows, with growing expertise in Playwright automation. Passionate about Networking, Gen AI, AI Agents, and Spec-Driven Development And MCP's (Model context protocol)

TECHNICAL SKILLS

Languages: Python, Numpy, Pandas, Matplotlib

Frontend & Backend: React, HTML5, CSS3, JavaScript, Nodejs

Networking: CCNA, TCP/IP, OSI Model, Routing & Switching, VLANs, Subnetting, IPv4/IPv6

Tools: Git, GitHub Actions, Playwright, Jira, Linux, VS Code, Cursor, Claude, Codex

Database: Microsoft SQL

EXPERIENCE

Cisco Systems Inc

Bangalore, India

Software Engineer

Aug. 2025 – Present

- Enhanced changelog portal with package version comparison features
- Developed reusable AI agent skills by directly integrating and prompting Large Language Models (LLMs).
- Created feature-intake documents and translated requirements into effective LLM prompts to accelerate AI-assisted feature development.
- Migrated Webex-JS SDK's AI docs to the org-wide Spec-Driven Development (SDLC-Skills) standard docs
- Generated machine-readable specs and coverage manifest enabling automated documentation-drift and coverage checks
- Working on E2E automation testing for Calling SDK features using Playwright
- Performed packet trace analysis and debugging for WebRTC based WxCalling workflows
- Recognized for quality delivery and proactive communication

PROJECTS

Notes & Reminder App | *React, Firebase, Flask, Azure OpenAI, GitHub Actions* —  **DEMO LINK** 2026

- Built and deployed a full-stack reminder application using React (Vite), Firebase (Auth and Firestore), and Flask backend
- Integrated LiteLLM with Azure OpenAI via Cisco Webex LLM Proxy to generate weekly AI-based productivity insights with fallback handling
- Implemented CI/CD pipelines using GitHub Actions, with frontend deployed on GitHub Pages and backend on Render

Webex Web SDK | *JavaScript, Handlebars.js, Fetch API, Bootstrap* 2025

- Built a full version-comparison tool for Cisco's open-source Webex JS SDK changelog (3 merged PRs, 1,900 LOC) that diffs all packages between two SDK releases and flags each as Added/Removed/Version-Changed/Unchanged.
- Engineered pure data-layer functions (package union, pre-release resolution, comparison stats) decoupled from a Handlebars-based UI layer, plus a GitHub-linked commit-history view.
- Implemented shareable URL state, copy-to-clipboard with fallback, and improved semantic-version sorting.

Malicious URL Detection | *Python, Machine Learning, SVM, Decision Trees* 2024

- Built a system to detect malicious URLs using machine learning algorithms
- Applied One-vs-All classification and compared models like SVM and Decision Trees
- Improved detection accuracy through model evaluation and analysis

EDUCATION

Chadalawada Ramanamma Engineering College

Tirupati, India

Bachelor of Technology in Computer Science Engineering – CGPA: 7.9

2024

CERTIFICATIONS

Cisco Certified Network Automation (CCNA) – Cisco Systems

Cisco Certified AI Technical Practitioner - Cisco Systems

GH-300: GitHub Copilot Certification – Microsoft

Python (Basic) – HackerRank

SQL (Basic) – HackerRank
